

## Electron Beam Lithography @NanoMicroFab: a powerful tool for research and industrial applications

Annamaria Gerardino, CNR Istituto di Fotonica e Nanotecnologie(IFN), Sede di Roma, Via Cineto Romano 42, 00156, Roma.

In this talk the basic principles and applications of Electron Beam Lithography will be described also in comparison with other lithographic techniques. An overview of the long lasting expertise on this lithography technique developed at IFN will be given together with some examples of collaborations developed both in research and in technology transfer and in particular with Leonardo Company.
