

## **Vertically-aligned carbon nanotubes for novel detectors**

Francesco Pandolfi

INFN Sezione di Roma 1, Dipartimento di Fisica, Sapienza Università di Roma

Vertically-aligned carbon nanotubes offer exciting new possibilities in the field of particle detectors. We will report on our development of new detectors, their potential application to searches for light dark matter and efficient UV light detection, and on the new carbon-nanotube growing facility recently installed in University of Rome Sapienza.
