

BIOGRAPHY

Francesca Ceccacci graduated at Sapienza University of Rome (2000) and in 2004 she received her Ph.D. in Chemical Sciences from Sapienza University, working in the field of chiral recognition in membrane models, such as micelles and liposomes. From 2004 to 2013 she worked in the field of the synthesis of natural bioactive compounds in the group of Prof. Rinaldo Marini Bettolo at the Chemistry Department of Sapienza University. In 2018 she became researcher at the National Research Council - Institute for Biological Systems (CNR-ISB).

Her expertise is in the field of colloid chemistry and physical organic chemistry as well as in organic synthesis. Her research activity is focused on polymolecular aggregates, such as micelles and liposomes, investigated as bio-membrane models and as drug delivery systems. The results of her scientific activity are reported in 44 publications on international journals, in one European Patent, 2 book chapters and in 42 communications in national and international congresses.
