

Dr Francesca De Falco is a researcher at the Institute for Polymers, Composites and Biomaterials of the National Research Council of Italy (CNR-IPCB). She holds a PhD in Industrial Product and Process Engineering (Material Science) from the University of Naples Federico II, with a thesis on “Microplastic pollution from synthetic textiles: quantitative evaluation and mitigation strategies”. Her main activities are focused on the application of analytical protocols for the detection and identification of microplastics and on the development of mitigation strategies. In the last two years, her publications on microplastic pollution have reached more than 100 citations.
