

Linas Jonušauskas (Chief Scientific Officer) is working with laser material processing since 2011 and is scheduled to receive his PhD degree in laser physics/material engineering in Vilnius University in autumn of 2020. In the autumn of 2015, he became a part of a high-tech company “Femtika,” which aims at commercializing femtosecond laser 3D nanofabrication. In the following years he rose to a prominent figure in the company securing position of Chief Scientific Officer. Currently he has more than 15 scientific publications and over 50 presentations in various scientific conferences and workshops. In Femtika he is responsible for overlooking scientific research and associated projects as well as establishing and maintaining close cooperation with academic partners.
