

Antonio Lanatà (Male) is currently an Associate Professor of Bioengineering at the University of Florence, Italy. In 2004, He started working at the Bioengineering and Robotics Research Centre “E. Piaggio” in Pisa and, in 2020, He joined the University of Florence. In 2007, He received the Ph.D. degree in Automation, Robotics, and Bioengineering from the University of Pisa. His research interests include design and implementation of wearable system for physiological monitoring, and statistical and nonlinear biomedical signal processing. Applications of his research include the assessment of autonomic nervous system activity on affective computing, assessment of mood and mental/neurological disorders, human/animal/robot interaction. He is author of more than 100 international scientific contributions in these fields published in peer-reviewed international journals, conference proceedings, books and book chapters. He has been involved in several international research projects of the European collaborative project. He has also been work-package/task leader in several EU projects including H2020-POTION-FETPROACT-01-2018, H2020-PHC-2015-689691-NEVERMIND, FP7-PSYCHE, FP7-CEEDS, and FP6-2004-IST-4-026987 PROETEX. He has been presenter, also as invited speaker, in several international conferences. Prof. Lanatà is currently serving as reviewer to many international journals and research funding agencies and as member of Program and Scientific Committees of yearly international conferences such as GLOBAL HEALTH, e-Health, ICT4AWE. He is Associate Editor of Frontiers Bionics and Biomimetics, MDPI Bioengineering, MDPI Bioelectronics, MDPI Biosensors, MDPI Algorithms, MDPI Electronics, MDPI Animals, The Open Cybernetics & Systemics Journal. He has also been Associate Guest Editor of MDPI Electronics for the Special Issues “Data Processing and Wearable Systems for Effective Human Monitoring” in 2016; IEEE Journal of Biomedical and Health Informatics for the Special Issues Sensor “Informatics for Managing Mental Health” in 2015; Frontiers Neuroscience for the Special Topic “Autonomic Nervous System (ANS) correlates in psychophysiological states investigation: sensing, processing and recognition” in 2012.
