Mathieu Salanne is professor at Sorbonne Université (Paris). He also holds a chair in computational science at the Maison de la Simulation, funded by the CNRS and CEA. He graduated in chemical engineering from Chimie ParisTech in 2004 and obtained his PhD in 2006 at Sorbonne Université. His research focuses on the modelling of molten salts (for energy production) and ionic liquids (for electrochemical storage of energy). He has published more than 130 peer-reviewed journal articles. He has received the IUPAP young scientist prize in computational physics in 2014. He currently holds an ERC consolidator grant for the project AMPERE (Accounting for the Metallicity of the electrode, the Polarization of the Electrolyte and Redox reactions in computational Electrochemistry).
