

Dr. Gabriele Varani is a chemical engineer with experience in the field of fluid-dynamics and mass transport applied to chemical and biological processes. He received his master degree (2014) and a Ph.D. in chemical engineering (2018) at "La Sapienza" University of Rome. At present, he is working at Biosensor s.r.l. His research focus is on the development of microfluidics devices, electrochemical sensors, software development, and 3D printing.
